# Adjusting the sight

You have to shoot a number of arrows without touching the sight adjustment.

Report the impacts of your arrows on the target of the application. Unreasonable arrows are to be noted with the score buttons.

In our example we suppose to have shot and noted 23 arrows

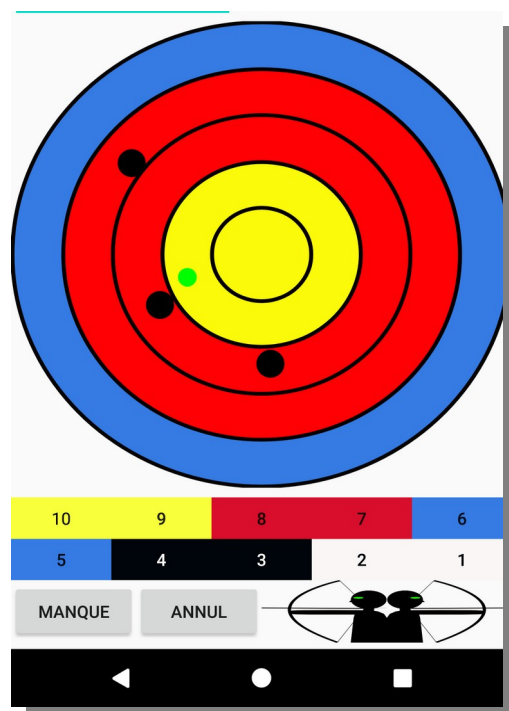

Go to the "Round Configuration" menu and change the number of arrows per end to 20.

Click on "LET'S GO"

The green dot now gives you the current setting of your sight.

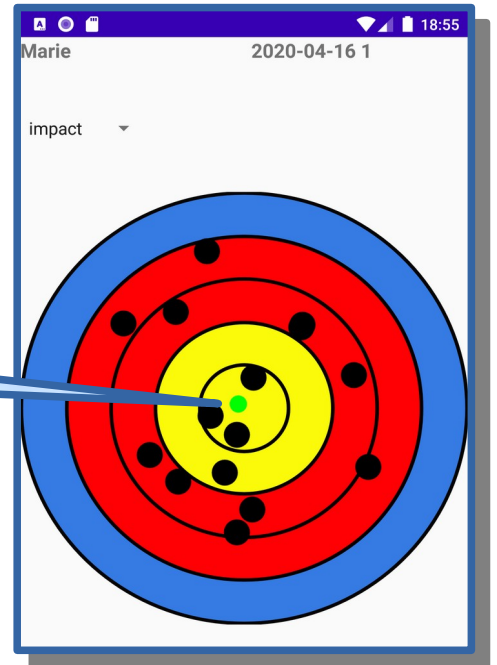

In our example the sight should be lowered and moved to the left.

# Check arrow

Note the position of the green dot on the “impact” result panel from a previous shooting series

Remember the position of green point

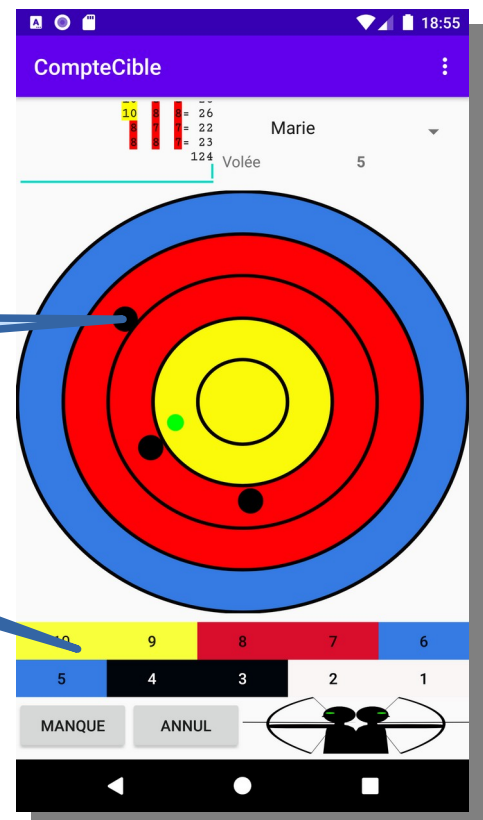

Shoot a number of arrows without touching the sight adjustment.

Report the impacts of the suspect arrow on the application target. The other arrows are to be noted with the score buttons.

Suspicious arrow impact

Score button for the other arrows

After a certain number of volleys return to the results panel of your new series and compare the green point with the old position

Very different points → doubts about the arrows

Very similar points → doubts about the archer
